STATIC MELTING FURNACE 10 KG

N.1 Art.Z51-310A: Induction static melting furnace for manual continuous melting and casting of precious-metal alloys in graphite mixture crucible, with automatic temperature control.

The temperature regulation is automatic and controlled by a thermoregulation foreseen inside the microprocessor; moreover the furnace control is made by a microprocessor control panel equipped with simple keys and back lighted display with liquid crystals: the functions of the control board are:

- start and stop;
- regulation and reading of the power;
- setting and reading of the temperature;
- alarm messages

ADVANTAGES:

- 1) Faster melting times thanks to a new technology;
- 2) Smaller dimensions;
- 3) **Inox** carpentry, avoiding the electromagnetic effects of the inductive field;
- 4) very good silence levels;

ACCESSORIES

delivered with the furnace

N.1 PLIERS

N.1 GAS BURNER FOR PROTECTION

N.1 COMPETE SET OF CRUCIBLE COMPLETE WITH LID AND GRAPHITE ROD

N.1 SERIES OF FUSES
